**Village at Main Veterinary Hospital
8313 SW Main St. Ste. 100
Wilsonville, OR 97070
503-570-9735**

Diet recommendations for animals with conditions that have created sensitive stomachs and intestines:

Day 1: It is best not to feed anything on Day 1 to adult animals. Water is fine and should be given in small amounts over the day up to 1 ounce per pound of body weight. For Puppies and Kittens use a 12-hour food fast and 2 ounces of water per pound spread out over the day.

Day 2: Feed **Veterinarian recommended diet**. Feed 1/3 of the quantity you would normally feed and spread it out over the day in at least 3 feedings. Water is done the same as on the first day.

Day 3: Feed the same foods as Day 2 but increase the amount to the regular amount fed spread out in 3 Feedings. Water the same as Day 1.

Day 4-5: Make up a 50-50 mix of some of the regular food you feed and the IVD food you have been feeding. Feed in 3 feedings over the day. Water can be free choice.

Day 6: Feed regular food in the number of meals you normally feed. Water can be free choice.

NOTE: If you prefer to cook for your pet, you can use oatmeal, Cream of Wheat, boiled white rice, **BOILED hamburger or Boiled chicken (skim off the fat)**.
